

Sai Yatish Kinthali

📍 Srikakulam, Andhra Pradesh, India ✉️ saiyatishk@gmail.com ☎️ 8897802043 🌐 in/saiyatishkinthali

Summary

Cybersecurity enthusiast with a solid foundation in **network security, ethical hacking, and Linux environments**. Hands-on experience in penetration testing labs, vulnerability assessment, and packet analysis using industry-standard tools. Passionate about real-world cybersecurity practices, threat analysis, and continuous upskilling. Eager to contribute in collaborative, knowledge-driven environments and support secure system development through practical problem-solving.

Education

Bachelors in Electronics and Communication Engineering

Gayatri Vidya Parishad College of Engineering (Autonomous)

2025

Diploma of Education in Electronics and Communication Engineering

Sri Venkateswara Polytechnic College

2021

Skills

Programming: Python (Basic), HTML

Operating System : Windows, Linux (Intermediate – Kali, Parrot)

Security Tools: Nmap, Wireshark, Burp Suite, Metasploit, Hydra, Nessus

Networking : TCP/IP, DNS, HTTP/HTTPS, Basic Network Troubleshooting, Wireshark Packet Analysis

Cybersecurity: Cybersecurity Fundamentals, Threat and Vulnerability Concepts, Vulnerability Assessment, Network Traffic Analysis

Experience

National Educational Alliance for Technology (N.E.A.T) associated with AICTE

Cybersecurity Internship

May 2023 - July 2023

Projects

Password Cracking & Wordlist Generation

July 2025 - August 2025

- Used **Hydra** to test SSH credentials on 5 target hosts in a controlled environment.
- Generated 3 custom wordlists with **CeWL** from simulated websites.
- Applied generated lists for password strength evaluation.

Packet Analysis for Threat Detection

July 2025 - August 2025

- Captured and analyzed 500+ packets using **Wireshark** during simulated attacks.
- Detected suspicious DNS and HTTP traffic linked to lab-based threats.

FTP Exploitation & Packet Analysis

July 2025 - August 2025

- Scanned target network using **Nmap**, identifying 1 active FTP service (port 21) with anonymous login enabled.
- Accessed and downloaded **5 sensitive files** from the FTP server in a controlled lab setup.
- Captured and analyzed 200+ packets in **Wireshark** to trace file transfer and detect unencrypted credentials.
- Documented findings with 4 recommended security controls, including disabling anonymous access and enforcing encryption.

Certifications

Certified Ethical Hacker (CEH)

EC Council (2025)

Google Cloud Cybersecurity Certificate

Google • 2025
